MARKET SIGNAL

**Finance-owned automation budgets are moving toward proof-heavy tools.**

Buyers are prioritizing products that connect payment workflow, cash visibility, fraud controls, and audit-ready reporting. The strongest near-term demand sits with teams that can prove CFO-level ROI without a long implementation cycle.

KEY RISK

**Long onboarding cycles can erase the impulse to buy.**

If implementation or data setup feels heavy, prospects defer the decision into a planning cycle. Low-friction packaged intelligence should lead with immediate value, clear scope, and a downloadable artifact before asking for deeper trust.

90-DAY OUTLOOK

**Entry-level snapshots can create faster trust for premium reports.**

The recommended motion is a \$49 instant snapshot for cold demand capture, followed by targeted upsell to Starter, Pro, or Enterprise analysis once the buyer has seen the Finvex format and signal quality.
